

World Jewish Population, 2005

THE WORLD'S JEWISH POPULATION was estimated at 13.034 million at the beginning of 2005—an increase of about 44,000 over the previous year's revised estimate.¹ World Jewry continues to be close to zero population growth. Israeli Jews constituted 40.2 percent of world Jewry.

The new figures reflect updated information on Jewish population that became available following the major round of national censuses and Jewish population surveys in countries with large Jewish populations over the period 1999–2005. This new evidence generally confirmed our previous estimates, but sometimes suggested upward or downward revisions. Over the last decade, a significantly expanded database has become available allowing for the critical assessment of the worldwide Jewish demographic picture.

Figures on population size, characteristics, and trends are a primary tool in the evaluation of Jewish community needs and prospects at the local level and internationally. The estimates for major regions and individual countries reported in this overview reflect a prolonged and ongoing effort to study scientifically the demography of contemporary world Jewry.² Data collection and comparative research have benefited from the collaboration of scholars and institutions in many countries, including replies to direct inquiries regarding current estimates. It should be emphasized, however, that the elaboration of a worldwide set of estimates for the Jewish populations of the various countries is beset with

¹ The previous estimates, as of January 1, 2004, were published in *AJYB* 2004, pp. 489–521. See also Sergio DellaPergola, Uzi Rebhun, and Mark Tolts, "Prospecting the Jewish Future: Population Projections 2000–2080," *AJYB* 2000, pp. 103–46; and previous *AJYB* volumes for further details on earlier estimates.

² Many of these activities are carried out by, or in coordination with, the Division of Jewish Demography and Statistics at the A. Harman Institute of Contemporary Jewry (ICJ), the Hebrew University of Jerusalem. The collaboration of the many institutions and individuals in the different countries who supplied information for this update is acknowledged with thanks. Thanks are due in particular to Yaacov Rubel (Buenos Aires), Ellen Rubinstein (Frankfurt a.M.), Lina Filiba (Istanbul), David Saks (Johannesburg), Marlana Schmool (London), Mauricio Lulka (Mexico City), Vivian Klaff (Newark, Delaware), Laurence Kotler-Berkowitz (New York), René Decol (São Paulo), Ira Sheskin (Miami), Gary Eckstein (Sydney), Benjamin Anderman, Erik H. Cohen, Judith Even, Norma Gurovich, Uzi Rebhun, Dalia Sagi, and Mark Tolts (Jerusalem).

difficulties and uncertainties.³ Users of Jewish population estimates should be aware of these difficulties and of the inherent limitations of our data.

DETERMINANTS OF JEWISH POPULATION CHANGE

Major geopolitical and socioeconomic changes have affected the world scene since the end of the 1980s, particularly the political breakup of the Soviet Union, Germany's reunion, the European Union's gradual expansion to 25 states (including the addition of ten new members on May 1, 2004), South Africa's transition to a new regime, political and economic instability in several Latin American countries, and the volatile situation in Israel and the Middle East. Jewish population trends were most sensitive to these developments. Large-scale emigration from the former USSR (FSU) and rapid population growth in Israel were the most visible effects, accompanied by other significant Jewish population transfers. Reflecting geographical mobility and increased fragmentation but also new consolidation of the global system of nations, over 80 percent of world Jewry live in two countries, the United States and Israel, and 95 percent are concentrated in the ten largest country communities. Six of the G8 countries⁴ (the United States, France, Canada, the United Kingdom, the Russian Republic, and Germany) comprise 87 percent of the total Jewish population outside of Israel. The aggregate of these major Jewish population centers virtually determines the assessment of world Jewry's total size and trends.

One fundamental aspect of population in general and of Jewish population in particular is its perpetual change. Population size and composition reflect a continuous interplay of three major determinants. Two of these are shared by all populations: (a) the balance of vital events (births and deaths); and (b) the balance of international migration (immigration and emigration). Both of these factors affect increases or decreases in the physical presence of individuals in a given place. The third determinant consists of identificational changes (accessions and secessions), and applies only to populations—usually referred to as subpopulations—that are defined by some cultural, symbolic or other specific peculiarity, as is

³ For overviews of the subject matter and technical issues see Paul Ritterband, Barry A. Kosmin, and Jeffrey Scheckner, "Counting Jewish Populations: Methods and Problems," *AJYB* 1988, pp. 204–21; and Sergio DellaPergola, "Demography," in Martin Goodman, ed., *The Oxford Handbook of Jewish Studies* (Oxford, 2002), pp. 797–823.

⁴ The eight leading economies in the world, also comprising Japan and Italy.

the case with Jews. The latter type of change does not affect people's physical presence but rather their willingness or ability to identify with a particular religious, ethnic or otherwise culturally defined group. Some of these passages receive formal sanction through a religious ritual ceremony of one sort or another. However, the emotional and quantitative significance of passages recorded in individual perceptions, devoid of any ceremonial, cannot be undervalued.

The country figures presented here for 2005 were updated from those for 2004 in accordance with the known or estimated changes in the interval—vital events, migrations, and identificational changes. In our updating procedure, whether or not exact data on intervening changes were available, we consistently applied the known or assumed direction of change, and accordingly added to or subtracted from previous Jewish population estimates. If there is evidence that intervening changes balanced each other off, Jewish population remained unchanged. This procedure proved highly efficient in the past. Most of the times when improved Jewish population figures became available reflecting a new census or survey, our annually updated estimates proved on target.

The more recent findings basically confirm the estimates we reported in previous AJYB volumes and, perhaps more importantly, our interpretation of the trends now prevailing in the demography of world Jewry.⁵ Concisely stated, these involve a positive balance of vital events (Jewish births and deaths) in Israel and a negative one in nearly all other Jewish communities; a positive migration balance for Israel, the United States, Germany, Canada, Australia, and a few other Western countries, and a negative one in Latin America, South Africa, Eastern Europe, Muslim countries, and some Western European countries as well; a positive balance of accessions and secessions in Israel, and an often negative, or, in any event, rather uncertain balance elsewhere. While allowing for improvements and corrections, the 2005 population estimates highlight the increasing complexity of the sociodemographic and identificational processes underlying the definition of Jewish populations, and hence the estimates of their sizes. This complexity is magnified at a time of perva-

⁵ For historical background, see Roberto Bachi, *Population Trends of World Jewry* (Jerusalem, 1976); U.O. Schmelz, "Jewish Survival: The Demographic Factors," AJYB 1981, pp. 61–117; U.O. Schmelz, *Aging of World Jewry* (Jerusalem, 1984); Sergio DellaPergola, "Changing Cores and Peripheries: Fifty Years in Socio-demographic Perspective," in Robert S. Wistrich, ed., *Terms of Survival: The Jewish World since 1945* (London, 1995), pp. 13–43; and Sergio DellaPergola, *World Jewry beyond 2000: Demographic Prospects* (Oxford, 1999).

sive international migration, often implying bi-local residences and double counts of people on the move. Consequently, the analyst has to come to terms with the paradox of the *permanently provisional* nature of Jewish population estimates.

SOURCES OF DATA

In general, the amount and quality of documentation on Jewish population size and characteristics is far from satisfactory. In recent years, however, important new data and estimates became available for several countries through official population censuses and Jewish-sponsored sociodemographic surveys. National censuses yielded results on Jewish populations in Ireland, the Czech Republic, and India (1991); Romania and Bulgaria (1992); the Russian Republic and Macedonia (1994); Israel (1995); Canada, South Africa, Australia, and New Zealand (1996 and 2001); Belarus, Azerbaijan, Kazakhstan, and Kyrgyzstan (1999); Brazil, Mexico, Switzerland, Estonia, Latvia, and Tajikistan (2000); the United Kingdom, Hungary, Croatia, Lithuania, and Ukraine (2001); and the Russian Republic and Georgia (2002). Permanent national population registers, including information on the Jewish religious, ethnic or national group, exist in several European countries (Switzerland, Norway, Finland, Estonia, Latvia, and Lithuania), and in Israel.

In addition, independent sociodemographic studies have provided most valuable information on Jewish demography and socioeconomic stratification, as well as on Jewish identification. Surveys were conducted over the last several years in South Africa (1991 and 1998); Mexico (1991 and 2000); Lithuania (1993); the United Kingdom and Chile (1995); Venezuela (1998–99); Israel, Hungary, the Netherlands, and Guatemala (1999); Moldova and Sweden (2000); France and Turkey (2002); and Argentina (2003 and 2004). In the United States important new insights were provided by two large surveys, the National Jewish Population Survey (NJPS, 2000–01) and the American Jewish Identity Survey (AJIS, 2001). Several further Jewish population studies were separately conducted in major cities in the United States (notably in New York City in 2002) and in other countries. Additional evidence on Jewish population trends can be obtained from the systematic monitoring of membership registers, vital statistics, and migration records available from Jewish communities and other Jewish organizations in many countries or cities, notably in the United Kingdom, Germany, Italy, Buenos Aires, and São Paulo. Detailed data on Jewish immigration routinely collected in Israel help in the

assessment of changing Jewish population sizes in other countries. Some of this ongoing research is part of a coordinated effort aimed at updating the profile of world Jewry.⁶

DEFINITIONS

A major problem with Jewish population estimates periodically circulated by individual scholars or Jewish organizations is a lack of coherence and uniformity in the definitional criteria followed—when the issue of defining the Jewish population is addressed at all. Simply put, the quantitative study of Jewish populations can rely only on operational, not normative, definitional criteria. Three major concepts must be considered in order to put the study of Jewish demography on serious comparative ground.

In most countries outside of Israel, the *core Jewish population*⁷ includes all those who, when asked, identify themselves as Jews; or, if the respondent is a different person in the same household, are identified by him/her as Jews. This is an intentionally comprehensive and pragmatic approach reflecting the nature of most available sources of data on Jewish population. In countries other than Israel, such data often derive from population censuses or social surveys where interviewees have the option to decide how to answer relevant questions on religious or ethnic preferences. Such a definition of a person as a Jew, reflecting *subjective* feelings, broadly overlaps but does not necessarily coincide with Halakhah (rabbinic law) or other normatively binding definitions. Inclusion does *not* depend on any measure of that person's Jewish commitment or behavior in terms of religiosity, beliefs, knowledge, communal affiliation, or otherwise.

⁶Following the International Conference on Jewish Population Problems held in Jerusalem in 1987, initiated by the late Roberto Bachi of the Hebrew University and sponsored by major Jewish organizations worldwide, an International Scientific Advisory Committee (ISAC) was established. See Sergio DellaPergola and Leah Cohen, eds., *World Jewish Population: Trends and Policies* (Jerusalem, 1992). An Initiative on Jewish Demography, sponsored by the Jewish Agency under the chairmanship of Sallai Meridor, led to an international conference held in Jerusalem in 2002 and to an effort of data collection and analysis implemented over the years 2003–05. The Jewish People Policy Planning Institute (JPPPI), chaired by Ambassador Dennis Ross, provides a framework for policy analyses and suggestions, including Jewish population issues. See Sergio DellaPergola, *Jewish Demography: Facts, Outlook, Challenges*, JPPPI Alert Paper 2 (Jerusalem, 2003); and *The Jewish People Policy Planning Institute Assessment 2005*, Executive Report 2 (Jerusalem, 2005).

⁷The term was initially suggested in Barry A. Kosmin, Sidney Goldstein, Joseph Waksberg, Nava Lerer, Ariela Keysar, and Jeffrey Scheckner, *Highlights of the CJF 1990 National Jewish Population Survey* (New York, 1991).

The *core* Jewish population includes all converts to Judaism by any procedure, as well as other people who declare they are Jewish. Also included are persons of Jewish parentage who claim no current religious or ethnic identity. Persons of Jewish parentage who adopted another religion are excluded, as are other individuals who in censuses or surveys explicitly identify with a non-Jewish group without having converted out. In the State of Israel, personal status is subject to the rulings of the Ministry of the Interior, which relies on criteria established by rabbinical authorities. In Israel, therefore, the *core* Jewish population does not simply express subjective identification but reflects definite legal rules, those of Halakhah. Documentation to prove a person's Jewish status may include non-Jewish sources.

The question whether Jewish identification according to this *core* definition can or should be mutually exclusive with other religious corporate identities emerged on a major scale in the course of the 2000–01 NJPS. The solution chosen—admittedly after much debate—was to allow for Jews with multiple religious identities to be included under certain circumstances in the standard definition of Jewish population.⁸ A category of Persons of Jewish Background (PJBs) was introduced: some of these were included in the Jewish population count and others were not. By the same token, Jews with multiple ethnic identities were included in the standard Jewish population count in Canada. The adoption of such extended criteria by the research community tends to stretch Jewish population definitions further than had usually been done in the past and beyond the abovementioned typical *core* definition. These procedures tend to limit actual comparability of the same Jewish population over time and of different Jewish populations at the same time.

The *enlarged Jewish population*⁹ includes the sum of (a) the *core* Jew-

⁸ In the latter survey, at least in the version initially processed and circulated by UJC, “a Jew is defined as a person whose religion is Judaism, OR whose religion is Jewish and something else, OR who has no religion and has at least one Jewish parent or a Jewish upbringing, OR who has a non-monotheistic religion and has at least one Jewish parent or a Jewish upbringing.” See Laurence Kotler-Berkowitz, Steven M. Cohen, Jonathon Ament, Vivian Klaff, Frank Mott, and Danyelle Peckerman-Neuman, with Lorraine Blass, Debbie Burszty, and David Marker, *The National Jewish Population Survey 2000–01: Strength, Challenge, and Diversity in the American Jewish Population* (New York, 2003). See also *Contemporary Jewry* 25, 2005, which is devoted to critical essays and analyses of NJPS methods and findings. This publication, the scholarly journal of the Association for the Scientific Study of Jewry, is edited by Samuel Heilman.

⁹ The term *enlarged Jewish population* was initially suggested by Sergio DellaPergola, “The Italian Jewish Population Study: Demographic Characteristics and Trends,” in

ish population; (b) all other persons of Jewish parentage who—by *core* Jewish population criteria—are *not* Jewish currently (or at the time of investigation); and (c) all of the respective further non-Jewish household members (spouses, children, etc.). Non-Jews with Jewish background, as far as they can be ascertained, include: (a) persons who have themselves adopted another religion, even though they may claim to be also Jewish by ethnicity or religion—with the caveat just mentioned for recent U.S. and Canadian data; and (b) other persons with Jewish parentage who disclaim being Jews. As noted, some PJBs who do not pertain to the *core* Jewish population naturally belong under the *enlarged* definition.¹⁰ It is customary in sociodemographic surveys to consider the religio-ethnic identification of parents. Some censuses, however, do ask about more distant ancestry. For both conceptual and practical reasons, the *enlarged* definition does not include other non-Jewish relatives who lack a Jewish background and live in exclusively non-Jewish households.

The *Law of Return*, Israel's distinctive legal framework for the acceptance and absorption of new immigrants, awards Jewish new immigrants immediate citizenship and other civil rights. According to the current, amended version of the Law of Return, a Jew is any person born to a Jewish mother or converted to Judaism (regardless of denomination—Orthodox, Conservative, or Reform), who does not have another religious identity. By ruling of Israel's Supreme Court, conversion from Judaism, as in the case of some ethnic Jews who currently identify with another religion, entails loss of eligibility for Law of Return purposes. The law as such does not affect a person's Jewish status—which, as noted, is adjudicated by Israel's Ministry of Interior and rabbinical authorities—but only the specific benefits available under the Law of Return. The law extends its provisions to all current Jews, their children, and grandchildren, as well as to the respective Jewish or non-Jewish spouses. As a result of its three-generation and lateral extension, the Law of Return applies to a large population, one of significantly wider scope than *core* and *enlarged* Jewish populations defined above.¹¹ It is actually quite difficult to estimate what the total size of the *Law of Return* population

U.O. Schmelz, P. Glikson, and S.J. Gould, eds., *Studies in Jewish Demography: Survey for 1969–1971* (Jerusalem-London, 1975), pp. 60–97.

¹⁰ See Kotler-Berkowitz et al., *National Jewish Population Survey 2000–01*.

¹¹ For a concise review of the rules of attribution of Jewish personal status in rabbinic and Israeli law, including reference to Jewish sects, isolated communities, and apostates, see Michael Corinaldi, "Jewish Identity," chap. 2 in his *Jewish Identity: The Case of Ethiopian Jewry* (Jerusalem, 1998).

could be. These higher estimates are not discussed below systematically, but some notion of their possible extent is given for the major countries.

The significant involvement of major Jewish organizations in Israel and in the U.S.—such as the Jewish Agency and the United Jewish Communities (UJC)—in sponsoring data collection tends to complicate research issues. Organizations are motivated by the needs of their constituencies rather than by sharp analytic criteria. The understandable interest of organizations to continue functioning and securing budgetary resources tends to bring them to favor viewing Jewish populations closer to the *enlarged* than to the *core* definition.

The following estimates of Jewish population distribution in each continent (table 1 below), country (tables 2–9), and major metropolitan areas (table 10) consistently aim at the concept of *core* Jewish population. The *core* is indeed the necessary starting point for any admittedly relevant elaboration about the *enlarged*.

PRESENTATION AND QUALITY OF DATA

Until 1999, Jewish population estimates presented in the *American Jewish Year Book* referred to December 31 of the year preceding by two the date of publication. Since 2000 our estimates refer to January 1 of the current year of publication. Efforts to provide the most recent possible picture entail a short span of time for evaluation and correction of available information, hence a somewhat greater margin of inaccuracy. Indeed, where appropriate, we revised our previous estimates in the light of newly accrued information on Jewish populations (tables 1 and 2). Corrections were also applied retrospectively to the 2004 figures for major geographical regions so as to ensure a better base for comparisons with the 2005 estimates. Corrections of the latest estimates, if needed, will be presented in future volumes of the AJYB.

We provide separate figures for each country with approximately 100 or more resident *core* Jews. Residual estimates of Jews living in other smaller communities supplement some of the continental totals. For each of the reported countries, the four columns in tables 3–7 provide an estimate of midyear 2004 total population,¹² the estimated 1/1/2005 Jewish population, the proportion of Jews per 1,000 of total population, and a rating of the accuracy of the Jewish population estimate.

¹² Data and estimates derived from Population Reference Bureau, *2004 World Population Data Sheet* (Washington, D.C., 2005).

There is wide variation in the quality of the Jewish population estimates for different countries. For many Diaspora countries it would be best to indicate a range (minimum–maximum) rather than a definite figure for the number of Jews. It would be confusing, however, to be confronted with a long list of ranges; this would also complicate the regional and world totals. The figures actually indicated for most of the Diaspora communities should be understood as being the central value of the plausible range of the respective core Jewish populations in these countries. The relative magnitude of this range varies inversely to the accuracy of the estimate.

The three main elements that affect the accuracy of each estimate are the nature and quality of the base data, how recent the base data are, and the method of updating. A simple code combining these elements is used to provide a general evaluation of the reliability of the Jewish population figures reported in the detailed tables below. The code indicates different quality levels of the reported estimates: (A) Base figure derived from countrywide census or relatively reliable Jewish population survey; updated on the basis of full or partial information on Jewish population movements in the respective country during the intervening period. (B) Base figure derived from less accurate but recent countrywide Jewish population data; partial information on population movements in the intervening period. (C) Base figure derived from less recent sources, and/or unsatisfactory or partial coverage of a country's Jewish population; updating according to demographic information illustrative of regional demographic trends. (D) Base figure essentially speculative; no reliable updating procedure. In categories (A), (B), and (C), the year in which the country's base figure or important partial updates were obtained is also stated. For countries whose Jewish population estimate for 2005 was not only updated but also revised in the light of improved information, the sign "X" is appended to the accuracy rating.

One additional tool for updating Jewish population estimates is provided by a recent set of demographic projections developed at the Hebrew University of Jerusalem.¹³ Such projections, based on available data on Jewish population composition by age and sex groups, extrapolate the most likely observed or expected Jewish population trends over the first decades of the twenty-first century. Even where reliable information on the dynamics of Jewish population change is not immediately available,

¹³ See DellaPergola, Rebhun, and Tolts, "Prospecting the Jewish Future."

the powerful connection that generally exists between age composition of a population and the respective vital and migration movements helps provide plausible scenarios of the developments bound to occur in the short term. Where better data were lacking, we used indications from these projections to refine the 2005 estimates as against previous years. On the other hand, projections are clearly shaped by a comparatively limited set of assumptions, and need to be periodically updated in the light of actual demographic developments.¹⁴

WORLD JEWISH POPULATION SIZE

The size of world Jewry at the beginning of 2005 was assessed at 13,034,100. World Jewry constituted 2.04 per 1,000 of the world's total population of 6,396 millions. One in about 490 people in the world is a Jew. According to the revised figures, between January 1, 2004, and January 1, 2005, the Jewish population grew by an estimated 44,100 people, or about 0.3 percent. This compares with a total world population growth rate of 1.3 percent (0.1 percent in more developed countries, 1.5 percent in less developed countries). Despite all the imperfections in the estimates, world Jewry continued to be close to zero population growth, with increase in Israel (1.3 percent) slightly overcoming decline in the Diaspora (-0.4 percent).

Table 1 gives an overall picture of Jewish population for the beginning of 2005 as compared to 2004. For 2004 the originally published estimates are presented along with somewhat revised figures that take into account, retrospectively, the corrections made in certain country estimates in the light of improved information. These corrections resulted in a net increase of the 2004 estimated size of world Jewry by 300. Explanations are given in the text below of the reasons for these minimal corrections.

The number of Jews in Israel rose from 5,165,400 in 2004 to 5,237,600 at the beginning of 2005, an increase of 72,200 people, or 1.4 percent. In contrast, the estimated Jewish population in the Diaspora diminished from 7,824,600 (according to the revised figures) to 7,796,500—a decrease of 28,100 people, or -0.4 percent. These changes reflect the continuing Jewish emigration from the FSU and other countries, but also the internal decrease typical of the aggregate of Diaspora Jewry. In 2004, the estimated Israel-Diaspora net migratory balance (immigration minus em-

¹⁴ A new round of population projections currently undertaken in the light of the latest data helped in the current assessment.

^dMidyear estimate of preceding year. Source: Population Reference Bureau.

igration) amounted to a gain of 5,200 core Jews for Israel.¹⁵ This calculation includes Israeli citizens born abroad who entered Israel for the first time. Therefore, internal demographic evolution (including vital events and conversions) produced nearly all of the growth among the Jewish population in Israel, and most of the decline in the Diaspora.

Recently, instances of accession or “return” to Judaism can be observed in connection with the absorption in Israel of immigrants from Eastern Europe and Ethiopia, and the comprehensive provisions of the Israeli Law of Return. The return or first-time access to Judaism of some of such previously unincluded or unidentified individuals contributed to slowing down the pace of decline of the relevant Diaspora Jewish populations and some gains for the Jewish population in Israel.

¹⁵ Israel Central Bureau of Statistics, *Monthly Bulletin of Statistics* (Jerusalem, 2005).

As noted, corrections should be introduced in previously published Jewish population estimates in the light of new information that has become available. Table 2 provides a synopsis of the world Jewish population estimates relating to the period 1945–2005, as first published each year in the *American Jewish Year Book* and as corrected retroactively, incorporating all subsequent revisions. These revised data correct, sometimes significantly, the figures published until 1980 by other authors and since 1981 by ourselves. Thanks to the development over the years of an improved database, these new revisions are not necessarily the same revised estimates that we published year by year in the AJYB based on the information that was available at each date. It is likely that further retrospective revisions of these numbers may be necessary reflecting ongoing and future research.

The revised figures in table 2 clearly portray the slowing down of Jewish population growth globally since World War II. Based on a post-Shoah world Jewish population estimate of 11,000,000, a growth of 1,079,000 occurred between 1945 and 1960, followed by growths of 506,000 in the 1960s, 234,000 in the 1970s, 49,000 in the 1980s, and 32,000 in the 1990s. While it took 13 years to add one million to world Jewry's postwar size, over 46 years were needed to add another million. Table 2 also outlines the slow Jewish population growth rate versus total population growth globally, and the declining Jewish share of world population. In 2005 the share of Jews per 1,000 world population was less than half what it was in 1945.

POPULATION DISTRIBUTION BY MAJOR REGIONS AND COUNTRIES

Over 46 percent of the world's Jews reside in the Americas, with over 43 percent in North America. Over 40 percent live in Asia, including the Asian republics of the former USSR (but not the Asian parts of the Russian Republic and Turkey)—most of them in Israel. Europe, including the Asian territories of the Russian Republic and Turkey, accounts for about 12 percent of the total. Fewer than 2 percent of the world's Jews live in Africa and Oceania. Among the major geographical regions listed in table 1, the number of Jews in Israel—and, consequently, in total Asia—increased in 2005. Moderate Jewish population gains were also estimated in Oceania (Australia and New Zealand). We estimate that Jewish population size diminished to variable extents in North, Central, and South America, the European Union (EU) and other European countries, the former Soviet republics in Europe and Asia, and Africa. These re-

gional changes reflect the trends apparent in the Jewish population in each of the major countries, with some notable exceptions within regions, such as the growth of Germany within the EU. We now turn to a review of recent trends in the largest Jewish populations.

North America

In the United States (table 3), two major studies were recently undertaken, the 2000–01 National Jewish Population Survey (NJPS)¹⁶ and the 2001 American Jewish Identity Survey (AJIS).¹⁷ The NJPS was sponsored by the United Jewish Communities (UJC), the coordinating body for the local Jewish federations in the U.S., and advised by a National Technical Advisory Committee chaired by Profs. Frank Mott and Vivian Klaff. A national stratified random-digit-dialing (RDD) sample covered the whole of the U.S., subdivided into seven strata based on pre-survey estimates of Jewish population density, with sampling probabilities proportional to Jewish density in each stratum. Over 175,000 households were screened for possible inclusion, based on four questions: (1) What is your religion (or that of other adults in the household), if any? (2) Do you or does any other adult in the household have a Jewish mother or a Jewish father? (3) Were you or any other adult in the household raised Jewish? (4) Do you, or does any other adult in the household, consider your/him/herself Jewish for any reasons? Answers to these questions included options other than yes or no, thus allowing for a nondichotomous resolution of Jewish population definition. From the beginning, such screening criteria were expected to produce results not strictly comparable with the 1990 NJPS.

The final unweighted sample included 4,220 Jewish respondents and 303 people of Jewish background (PJB), for a total of 4,523 Jewish households; 625 non-Jews of Jewish background; and 4,027 non-Jews, for a total of 9,175 respondent households. The 4,027 non-Jewish households were interviewed for a National Survey of Religion and Ethnicity (NSRE) to collect data necessary for weighting and thus estimating the size of the Jewish population, and to provide comparative data to Jews and PJBs on

sociodemographic topics. The rate of response to the screening interview was 28 percent. Weights were directly or indirectly estimated and applied to adjust for the number of telephone lines in the household, and to match sample household and respondent data to the U.S. Census totals for sampling strata, age, gender, and region.¹⁸

Following claims of excessively low respondent rates, selective population undercounts, and other inappropriate procedures during and following fieldwork, the NJPS was submitted to independent professional scrutiny. It was concluded that the study—although handicapped by several methodological shortcomings such as low response rates, inconsistent survey coverage of relevant subpopulations, and loss of documentation—stood within the range of professionally acceptable research standards and biases.¹⁹

The total U.S. Jewish population was estimated at 5.2 million, including 4.3 million with clearly Jewish connections, 800,000 persons of Jewish background but whose Jewish identification was less clear, and over 100,000 persons in institutions. (The actual NJPS total number was below 5.1 million, but a round estimate of 5.2 million was arrived at by including persons in institutions and persons who did not report their age). Respondents from the first group, the 4.3 million, were administered a long-form questionnaire, while most respondents from the second, the 800,000, were administered a short-form questionnaire that covered a limited selection of the survey's variables. The total number of Jews plus non-Jews of Jewish background (including those with no Jewish connections) was estimated at 6.7 million. The total number of individuals in the 2.9 million households with at least one Jewish member was estimated at 8.7 million, significantly higher than in 1990.

Even as one major national Jewish population survey (the NJPS) was being undertaken, an alternative one (the 2001 AJIS) was being developed, testifying to substantive disagreements within the Jewish community and among its researchers about how to go about such a project. AJIS was based on a national RDD sample. Out of all successful contacts, a total of 50,238 respondents agreed to be interviewed. After a se-

¹⁹ Mark Schulman, “National Jewish Population Survey 2000–01: Study Review Memo,” prepared for the United Jewish Communities, 2003.

ries of screening questions quite similar to those of NJPS 1990, 1,668 respondents qualified to be included in a survey of American Jewish households. The response rate was 18 percent.²⁰ The estimated core Jewish population, including Jews with no religion and Jews by choice, as well as Jews in institutions, was 5,340,000. Of these, 3,460,000 were born Jews whose religion was Judaism, 170,000 were converts to Judaism/Jews by choice, and 1,710,000 were born Jews with no religion. The total of Jews and others of Jewish origin was 7,690,000. The total of individuals in all households surveyed, including those without any current “core” Jew, was 9,740,000, excluding persons in institutions. The AJIS data (and not those of the 2000–01 NJPS) conceptually match the 1990 NJPS figures.

Combined reading of these two major current surveys suggests a core Jewish population in the range of 5.2–5.35 million. Assuming an intermediate value of 5.3 million, the revised 2001 estimate was at least 400,000 short of the 5.7 million we had projected for 2002 based on the 5.515 million estimated for mid-1990 by the previous NJPS.²¹ There had reportedly been a Jewish influx during the 1990s of at least 200,000 new immigrants—from the former Soviet Union, Israel, Latin America, South Africa, Iran, and Western Europe. However, continuing low Jewish fertility rates, the consequent aging in population composition, and comparatively weak propensities to identify with Judaism among younger adults of mixed Jewish–non-Jewish ancestry apparently led to a significantly lower total core population size. In the historical perspective of Jewish population research in the U.S. over the last 50 years, the new findings appeared quite consistent, and more likely to be the product of actual demographic trends than an artifact of insufficient data.²²

A 2002 study of the Jews in New York, the largest U.S. metropolitan community, pointed to a stable Jewish population of 1.4 million in the extended eight-borough area, but, for the first time in over three-quarters of a century, fewer than one million Jews lived in New York City’s five boroughs.²³

Our national U.S. estimate for 2005 assumes that the lack of growth—

²³ See <http://www.ujafedny.org/site/PageServer?pagename=jewishcommunitystudy>.

in fact, actual population decrease—manifested, despite continuing immigration, through the 2001 surveys, is now a well-established trend. As a result, U.S. Jewry is characterized by an aging population composition, and its effectively Jewish fertility levels are significantly below its virtual demographic potential even with the inclusion of all the children of out-marriages. Under the present circumstances we estimate an annual total of about 50,000 Jewish births and nearly 60,000 Jewish deaths in the U.S. We therefore suggest a further reduction by 10,000 from our 2004 estimate of 5,290,000 million, to 5,280,000, still the largest Jewish population on Earth.

In Canada, the 2001 population census²⁴ indicated a decrease in the number of Jews according to ethnicity (including those declaring a religion other than Judaism) from 369,565 in 1991 to 348,605 in 2001 (–20,960, or 5.7 percent). Of the ethnic Jews in 2001, 186,475 indicated that Jewish was their sole ethnicity, and the other 162,130 mentioned it as one of their several ethnic identities. The percentage with an exclusively Jewish ethnicity thus amounted to only 53 percent of all those reporting a Jewish ethnicity, as compared to 66 percent in 1991 and 90 percent in 1981. On the other hand, the number of Canada's Jews according to religion increased from 318,070 in 1991 to 329,995 in 2001 (+11,925, or 3.7 percent). It should be noted that 22,365 Jews entered the country during the ten-year interval between the two censuses, and consequently the Jewish population would have decreased by 10,440 (3.3 percent) were it not for this immigration.

Keeping in mind that some ethnic Jews are not Jewish by religion and that an even greater number of Jews by religion do not declare a Jewish ethnicity, a combined estimate of 370,520 obtained for Canada's Jewish population, up 4 percent from 356,315 in 1991.²⁵ Assuming continuing immigration to Canada, we evaluate the 2005 Jewish population at 372,000, the world's fourth largest. This figure was not strictly comparable with the concept of *core* Jewish population as it included some individuals for whom Jewish was only one among multiple ethnic identities. Some of these would better be included in the *enlarged* Jewish population. Taking into account all ethnic Jews who profess a non-Jewish religion, and other non-Jewish household members, an enlarged Jewish population of above 450,000 would probably obtain.

Latin America

In Latin America, the Jewish population was generally in decline, reflecting recurring economic and local security concerns. In Argentina, nearly 6,000 Jews emigrated to Israel in 2002—the highest figure ever in a single year from that country—due to the dire economic conditions and special incentives offered on the Israeli side. In 2003 the economic situation eased somewhat and Israel suspended its incentives. About 1,500 Jews emigrated from Argentina to Israel in 2003, declining to 458 in 2004.²⁶ Based on the experience of previous years, approximately 20 percent of these migrants were non-Jewish household members in the enlarged population. Partial evidence from different sources indicated that less than half of total Jewish emigration from Argentina went to Israel. Contrary to some rumors, the official data pointed to high permanence rates in Israel of the new immigrants, at least during the first year, and an expected attrition of about 10 percent leaving within the first three years.²⁷ We consequently assessed Argentina's Jewish population at 185,000 in 2005, the world's seventh largest.

In 2004 and 2005 two new Jewish population surveys were undertaken in the Buenos Aires metropolitan area (AMBA). Initial claims of a Jewish population of 244,000²⁸ appeared to be founded on significantly inconsistent definitional criteria. Of that 244,000, 64,000 reported to be of Christian religion, and another about 20,000 reported some Jewish ancestry but did not consider themselves Jewish. Overall, 161,000 people in the AMBA considered themselves as totally or partly Jewish—consistent with our 2004 estimate of 165,000. This figure for the large urban concentration appeared coherent with our 185,000 countrywide *core* estimate. The 244,000 figure would be a good estimate of the *enlarged* Jewish population in Greater Buenos Aires. Another survey limited to the City of Buenos Aires pointed to the aging composition of the core population, also reflecting the emigration of younger households over recent years.²⁹ The current situation implies a yearly loss of about 1,000 through a negative balance of Jewish births and deaths.

The 2000 census of Brazil indicated a rather stable Jewish population of 86,828, up from 86,416 in 1991.³⁰ Considering the possible noninclusion of individuals who did not answer the census question on religion, we assessed Brazil's Jewish population at 97,000 in 2003 and, allowing for moderate emigration, 96,700 in 2005, the world's tenth largest. This appeared to be consistent with a systematic documentation effort undertaken by the Jewish Federation of São Paulo,³¹ and an assumption that about one half of Brazil's Jews live in that city. Brazil's enlarged Jewish population (including non-Jewish members of Jewish households) was assessed at 132,191 in 1980 and 117,296 in 1991³² and presumably exceeded 120,000 in 2000.

In Mexico, the 2000 census indicated a Jewish population of 45,260 aged 5 and over.³³ Of these, 32,464 lived in the metropolitan area of the capital, Mexico City, while—consistent with erratic figures in past censuses—a most unlikely 12,796 were reported in states other than the Federal District and Mexico State. Allocation of the 0–4 age group based on a 2000 Jewish survey determined a corrected estimate of about 35,000 Jews in Greater Mexico City, and 40,000 nationwide. A Jewish population survey undertaken in 2000 provided a countrywide estimate of 39,870 Jews, of which 37,350 were in Mexico City.³⁴ This confirmed the results of a previous 1991 survey.³⁵ In 2005, allowing for minor emigration, we estimated the Jewish population at 39,800, the world's 14th largest.

The fourth largest Jewish community in Latin America is located in Chile,³⁶ whose relatively stable Jewish population is now larger than those

of Uruguay³⁷ and Venezuela.³⁸ Both of the latter countries experienced significant Jewish emigration in recent years. Around 2000, about 20 percent of the former pupils of Jewish schools in Uruguay and over one-third of the adult children of Caracas Jews lived in a different country.

European Union

Jewish population in Europe (table 4) tended to be increasingly concentrated in the western part of the continent, and within the European Union. On May 1, 2004, the EU expanded from 15 to 25 countries, incorporating the three Baltic countries that had been part of the Soviet Union (Estonia, Latvia, and Lithuania), another five that had been part of the Soviet area of influence in Eastern Europe (the Czech Republic, Hungary, Poland, Slovakia, and Slovenia), and two southern European insular countries (Cyprus and Malta). The EU thus reached an estimated total of 1,122,000 Jews, comprising 74 percent of the continent's total Jewish population. The other former Soviet republics in Europe outside the EU comprised 344,800 Jews, or 23 percent of European Jewry. All other European countries comprised 53,800 Jews, or 3 percent of the Jews of Europe. The EU's expanded format symbolized an important historical landmark: the virtual boundary between Western and Eastern Europe was erased, while further Eastern European countries such as Romania, Bulgaria, and Croatia were bound for future incorporation within the EU. Ongoing debates about the possible incorporation of Turkey in the longer term pointed to the further blurring of Europe's traditional cultural and geopolitical boundaries.

The largest Jewish community in Europe was in France, where a new countrywide survey undertaken at the beginning of 2002 suggested a downward revision to 500,000 core Jews plus an additional 75,000 non-Jewish members of Jewish households.³⁹ Before the survey, our Jewish population estimate stood at 519,000. The difference, cumulated over several years, was primarily due to a growing pace of Jewish emigration

not only to Israel—amounting to 2,000 in 2004—but also to Canada and other countries. Jewish emigration tended to respond to increasing manifestations of anti-Jewish intolerance, including physical violence. A survey of Jewish tourism from France to Israel unveiled a remarkable estimate of 125,000, or more than 30 percent of all French Jews aged 15 and over, who had visited the Jewish state.⁴⁰ Of these, 23 percent (about 29,000) affirmed their intention to move to Israel in the near future. A

⁴⁰ Erik H. Cohen, *Les touristes de France en Israël 2004* (Jerusalem, 2005).

distant second candidate for possible emigration was the U.S. Although migration intentions are not a proxy for actual migration decisions, the attrition in the feelings of security among French Jewry is undisputable. Our 2005 estimate for French Jewry therefore slightly shrinks to 494,000, the third largest in the world.

In the United Kingdom, the 2001 national population census provided detailed data about religion, for the first time since the nineteenth century.⁴¹ The total Jewish population of 266,741 for England, Wales, Scotland, and Northern Ireland closely approximated our 273,500 estimate for 2002. However, considering that 22.8 percent of the UK population indicated that they had no religion and that another 7.3 percent did not answer the question—at a time when much of the organized Jewish community publicly supported participation in the census—we suggested raising the estimate to 300,000 for 2001. More detailed data from the same census for Scotland (some of its questions were different from those asked in the rest of the UK) indicated 6,448 people currently reporting Jewish religion, as compared to a total of 7,446 who said they were raised as Jews—a net loss of 13 percent.⁴² Vital statistics routinely collected by the Board of Deputies Community Research Unit show a continuing excess of Jewish deaths (3,670 in 2002, 3,592 in 2003, and 3,257 in 2004) over Jewish births (2,665 in 2002, and the same in 2003).⁴³ The diminishing number of deaths is an obvious symptom of a shrinking population which loses about 1,000 people yearly through a negative vital balance. Taking into account some minor emigration as well, we estimated the UK's total Jewish population at 297,000 in 2005, the world's fifth largest.

In Germany, significant if slightly diminished Jewish immigration continued. In 2004, 4,757 immigrants from the former Soviet Union were recorded as new members of German Jewish communities, as compared to 6,224 in 2003 and 6,597 in 2002.⁴⁴ Admission criteria in the community follow Jewish rabbinical rules. The total number of core Jews regis-

⁴¹ The census is available at <http://www.ons.gov.uk>. See also Barry Kosmin and Stanley Waterman, *Commentary on Census Religion Question* (London, 2002), a publication of the JPR (Institute for Jewish Policy Research).

tered with the central Jewish community grew to 105,733 at the beginning of 2005, versus 102,472 one year earlier. Of the current total, fewer than 12,000 were part of the initial pool of 28,081 members that existed at the end of 1990, and the rest were recent immigrants. Since 2002, the enlarged total of Jews and non-Jewish family members who came to Germany from the FSU was larger than the respective number of FSU migrants to Israel. The age composition of the Jewish old-timers—and even more so of the newcomers—was extremely skewed to the elderly. In 2004 there were 139 Jewish births and 1,095 Jewish deaths recorded by the Jewish community in Germany, as well as 79 conversions to Judaism and 408 conversions from Judaism. This explains why the growth of the Jewish community is significantly less than the total number of new immigrants. Allowing for delays in joining the organized community and a preference on the part of some members of a minority not to identify officially with its institutions, we assess Germany's *core* Jewish population at 115,000, the world's eighth largest. The *enlarged* Jewish population, inclusive of the non-Jewish relatives of immigrants, must be approaching 200,000, and creates an entirely new framework for Jewish social and cultural life in Germany.⁴⁵

In Hungary, our core estimate of just below 50,000 (the world's 13th largest) reflects the unavoidably negative balance of Jewish births and deaths in a country where the total population's vital balance has been negative for several years in a row. Indeed, a Jewish survey in 1999⁴⁶ indicated a conspicuously larger enlarged Jewish population. However, a demographic extrapolation based on the usually accepted number of post-Holocaust core Jewish survivors and accounting for the known or estimated numbers of births, deaths, and emigrants since 1945 closely matches our assessment. It should be noted that in the 2001 Hungarian census a scant 13,000 people reported themselves Jewish by religion.

Belgium's Jewish population was estimated above 30,000, the 15th largest worldwide. Quite stable numbers reflected the presence of a traditional Orthodox community in Antwerp and the growth of a large European administrative center in Brussels. Local Jewish population estimates were quite obsolete in comparison with most other EU countries. The next two largest Jewish communities in the EU were those in the

Netherlands and Italy. In the Netherlands, a survey in 2000 estimated a Halakhic Jewish population of 30,072, of which perhaps as many as a third were immigrants from Israel, and an enlarged Jewish population of 43,305.⁴⁷ In Italy, total Jewish community membership—which historically comprised the overwhelming majority of the country’s Jewish population—declined from 26,706 in 1995 to 25,143 in 2001.⁴⁸ Our estimate, slightly below 29,000, adequately accounts for nonmembers.

Former Soviet Union

In the former Soviet Union, rapid Jewish population decrease continued, reflecting an overwhelming surplus of Jewish deaths over births, high rates of outmarriage and low rates of Jewish identification of the children, and conspicuous though diminishing emigration. Our 2005 assessment of the total core Jewish population in the aggregate of the 15 former Soviet Republics was 379,800, of which 359,500 lived in Europe and 20,300 in Asia. At least as many non-Jewish family members were part of the respective enlarged households. The ongoing process of demographic decline was compensated to some extent by the revival of Jewish cultural and religious activities, including Jewish education.⁴⁹

In the Russian Republic, the October 2002 census indicated 233,600 Jews as against our core Jewish population estimate of 252,000 for the beginning of 2003 (derived from the February 1994 Russian Microcensus estimate of 409,000 Jews).⁵⁰ Allowing for some census undercounts

after the compulsory item on ethnicity (*natsyonalnost*) on identification documents was canceled, and the option not to state an ethnicity was allowed for the first time, we estimate the Jewish population at 235,000 in 2005 (including a minor upward revision), the sixth largest in the world. The size of Russian Jewry was clearly more stable and resilient than in the other former Soviet republics. This was partly a consequence of Jewish migrations between the various republics and also the lower emigration propensities from Moscow and some of the other main urban areas.⁵¹ Nevertheless, the striking imbalance of Jewish births and deaths, and ongoing emigration meant continuing population decline and an elderly age composition. The decline in the number of births to at least one Jewish parent could be estimated at 8,006 in 1988 and 2,177 in 1998. Recorded Jewish deaths were 13,826 in 1988 and 9,103 in 1998. As a result, the estimated negative balance of these vital events was -5,820 in 1988 and -6,926 in 1998.⁵²

In the Ukraine, the population census undertaken on December 5, 2001, yielded 104,600 Jews, whereas we had expected 100,000 on January 1, 2002. Considering that our baseline for the latter estimate were the 487,300 Jews counted in the previous census of January 1989, the fit between expected and actual results was quite remarkable.⁵³ Taking into account the dramatic pace of emigration since 1989, the other major intervening changes among Ukraine's Jews, and the continuing emigration at the end of 2001, the census fully confirmed our previous assessment of ongoing demographic trends. Adding continuing emigration in 2003 and 2004, we assess the 2005 core Jewish population at 84,000, the 11th largest in the world.

Of the other former Soviet republics in Europe, after the accession of the three Baltic states (with a total Jewish population of 14,700 after minor revisions for Estonia and Latvia) to the European Union, the main Jewish population was in Belarus, now assessed at 21,000. Pending a new census, a survey in Moldova found an enlarged Jewish population of 9,240 in 2000.⁵⁴ We assess the core Jewish population at 4,800 in 2005.

Rest of Europe

After Hungary—the largest Jewish community in the rest of Central and Eastern Europe—joined the EU together with Poland (whose latest census indicated a Jewish population of 1,100), the Czech Republic, Slovakia, and Slovenia, only 34,400 Jews remained in non-EU East Europe and the Balkans, primarily in Turkey. A survey in Istanbul pointed to widespread aging in a community that has experienced significant past emigration. In Istanbul, 14 percent of the Jewish population was under age 18, versus 18 percent above 65.⁵⁵

Asia

Jewish population in Asia is mostly affected by the trends in Israel (table 5). At the beginning of 2005, Israel's core Jewish population reached 5,237,600, forming an enlarged Jewish population of 5,529,300 when combined with 291,700 non-Jewish members of Jewish households.⁵⁶ Most of the 1,730 people who in 2004 underwent conversion to Judaism (as compared to 919 in 2003 and 3,533 in 2002) were new immigrants from Ethiopia, while a few hundred were immigrants from the FSU.⁵⁷ In 2004, 24,800 new immigrants arrived in Israel, of whom 14,200 were Jewish.⁵⁸ Current Jewish emigration reduced this to a net migration balance of 5,200. Israel's Jewish fertility rate continued to be stable, even rising slightly to 2.7 children per woman, higher than that of every other developed country and probably twice or more the effective Jewish fertility level across Diaspora Jewish communities. In 2004, for the first time ever, more than 100,000 Jewish babies were born in Israel, helping to determine a net natural increase of 67,300. Of the 5,237,600 core Jews in 2005, 5,000,600 lived within the pre-1967 borders plus East Jerusalem and the Golan Heights, where they formed 75.4 percent of the total legally permanent population, and 237,000 lived in the West Bank and Gaza, where they formed 6.6 percent of the total.

^aTotal population of Israel, including Jews in West Bank and Gaza, 1/1/2005: 6,869,500.

^bTotal Palestinian population in West Bank and Gaza: 1/1/2005: 3,350,000 (revised).

^cIncluding Armenia and Tajikistan. Not including Asian regions of Russian Republic.

^dIncluding Hong Kong and Macao.

Jews represented 76.2 percent of a total population of 6,869,500 in the State of Israel, including East Jerusalem, the Golan Heights, and the Jewish but not the Palestinian population in the West Bank and Gaza. Jews comprised 6.6 percent of the total inhabitants in the West Bank and Gaza. Considering the total legal population resident in the State of Israel, the West Bank, and Gaza, evaluated at 10,219,500, Jews represented 51.2 percent, or slightly more than half. All of the preceding figures relate to the core Jewish population. If the 291,700 non-Jewish members of Jewish households are added to the Jewish side, the enlarged Jewish population thus obtained represented 80.5 percent of Israel's population (as defined above), and 54.1 percent of the total population of Israel and the Palestinian territories. On the other hand, with the further addition of about 190,000 non-Jewish foreign workers residing in Israel, core and enlarged Jews diminished, respectively, to 50.3 and 53.1 percent of the total population of 10,409,500 present in Israel and the Palestinian territories.

These estimates were significantly affected by the assessment of the total Palestinian population of the West Bank and Gaza. The latter were the subject of a high-profile debate in the media following the assertion by a group of American and Israeli investigators that current population estimates from Palestinian sources were inflated.⁵⁹ The Palestinian Central Bureau of Statistics, after a downward revision of over 100,000 to account for expected immigration that did not materialize, estimated the population in the Palestinian territories including East Jerusalem at 3,762,005 by July 1, 2005.⁶⁰ Our own independent assessment, allocating 237,000 East Jerusalem Arabs to the Israeli side and taking into account an actually negative migration balance of Palestinians and further corrections, was 3,350,000 on January 1, 2005.⁶¹ The faster pace of population growth among Palestinians, assessed at over 3 percent annually, unquestionably generated a gradual attrition in the extant Jewish majority over the whole territory between the Mediterranean Sea and the Jordan River, and within the State of Israel itself.⁶²

⁶² For an extensive discussion of the background, thrust and implications of past and current population changes see Sergio DellaPergola, "Demographic Trends in Israel and Palestine: Prospects and Policy Implications," *AJYB* 2004, pp. 3–68. See also Arnon Sofer

The Jewish population in the rest of Asia consisted mainly of the rapidly declining communities in the FSU's eight Asian republics, the largest of which was Azerbaijan (7,000 Jews), followed by Uzbekistan (5,000), Kazakhstan (3,800) and Georgia (3,600).⁶³ The largest Jewish population in a single country in Asia besides Israel was in Iran. Our estimate there, 10,800, reflects an effort to monitor widespread emigration since the Islamic revolution of the late 1970s.

Africa

Jewish population in Africa was mostly concentrated in South Africa (table 6). According to the 2001 census,⁶⁴ the white Jewish population amounted at 61,675. After factoring in the national nonresponse rate of 14 percent, a corrected estimate of 72,000 obtained. Allowing for a certain proportion of actual Jews reported among South Africa's nonwhites (11,979 blacks, 1,287 coloreds, and 615 Indians), we assessed the total size of the Jewish community at 75,000. Allowing for a moderate continuation of emigration, we estimate South Africa's Jewish population at 72,500 in 2005, the world's 12th largest.

Our revised estimates for North Africa acknowledge the ongoing reduction in the small Jewish population remaining in Morocco and Tunisia, now assessed at 4,600 overall.

Oceania

Continuing immigration produced some increase in the size of Jewish populations in Oceania (table 7). Australia's 2001 census indicated a Jewish population of 83,500, up about 4,000 from 1996.⁶⁵ Taking into account both nonresponse and the community's rather old age composition, we estimate the core Jewish population at 102,000 in 2005, the ninth largest in the world. The 2001 census also pointed to some Jewish population increase in New Zealand.

^aIncluding countries not listed separately.

DISPERSION AND CONCENTRATION

Reflecting global Jewish population stagnation along with growing concentration in a few countries, 97.4 percent of world Jewry lives in the largest 15 communities, and, excluding Israel from the count, 95.6 percent lives in the 14 largest communities of the Diaspora, of which 67.7 percent are in the U.S. (table 8). In 2005, there were at least 100 Jews in 93 different countries (table 9). Two countries had Jewish populations above 5 million each (the U.S. and Israel), another seven had more than 100,000 Jews, three had 50,000–100,000, five had 25,000–50,000, ten had 10,000–25,000, and 66 countries had less than 10,000. These 66 communities overall accounted for 1 percent of world Jewry. In only seven

TABLE 9. DISTRIBUTION OF THE WORLD'S JEWS, BY NUMBER, AND PROPORTION (PER 1,000 POPULATION) IN EACH COUNTRY, 1/1/2005

| Number of Jews in Country | Jews per 1,000 Population | | | | | |
|------------------------------|---------------------------|---------|---------|---------|-----------|-------|
| | Total | 0.0-0.9 | 1.0-4.9 | 5.0-9.9 | 10.0-24.9 | 25.0+ |
| | Number of Countries | | | | | |
| Total ^a | 93 | 62 | 23 | 4 | 3 | 1 |
| 100-900 | 35 | 31 | 3 | | 1 | - |
| 1,000-4,900 | 22 | 20 | 2 | - | - | - |
| 5,000-9,900 | 9 | 3 | 6 | - | - | - |
| 10,000-24,900 | 10 | 5 | 4 | 1 | | - |
| 25,000-49,900 | 5 | 2 | 3 | - | | - |
| 50,000-99,900 | 3 | 1 | 2 | - | | - |
| 100,000-999,900 | 7 | | 3 | 3 | 1 | - |
| 1,000,000 or more | 2 | | | | 1 | 1 |

Jewish Population Distribution (Absolute Numbers)

| | | | | | | |
|--------------------|------------|---------|---------|---------|-----------|-----------|
| Total ^a | 13,034,100 | 304,900 | 925,400 | 912,500 | 5,652,600 | 5,237,600 |
| 100-900 | 11,000 | 9,200 | 1,200 | - | 600 | - |
| 1,000-4,900 | 52,100 | 46,900 | 5,200 | - | - | - |
| 5,000-9,900 | 58,800 | 17,100 | 41,700 | - | - | - |
| 10,000-24,900 | 160,700 | 66,500 | 74,700 | 19,500 | - | - |
| 25,000-49,900 | 179,600 | 68,500 | 111,100 | - | - | - |
| 50,000-99,900 | 253,200 | 96,700 | 156,500 | - | - | - |
| 100,000-999,900 | 1,800,000 | | 535,000 | 893,000 | 372,000 | - |
| 1,000,000 or more | 10,517,600 | - | | - | 5,280,000 | 5,237,600 |

Jewish Population Distribution (Percent of World's Jews)

| | | | | | | |
|--------------------|-------|-----|-----|-----|------|------|
| Total ^a | 100.0 | 2.3 | 7.1 | 7.0 | 43.4 | 40.2 |
| 100-900 | 0.1 | 0.1 | 0.0 | 0.0 | 0.0 | 0.0 |
| 1,000-4,900 | 0.4 | 0.4 | 0.0 | 0.0 | 0.0 | 0.0 |
| 5,000-9,900 | 0.5 | 0.1 | 0.3 | 0.0 | 0.0 | 0.0 |
| 10,000-24,900 | 1.2 | 0.5 | 0.6 | 0.1 | 0.0 | 0.0 |
| 25,000-49,900 | 1.4 | 0.5 | 0.9 | 0.0 | 0.0 | 0.0 |
| 50,000-99,900 | 1.9 | 0.7 | 1.2 | 0.0 | 0.0 | 0.0 |
| 100,000-999,900 | 13.8 | 0.0 | 4.1 | 6.9 | 2.9 | 0.0 |
| 1,000,000 or more | 80.7 | 0.0 | 0.0 | 0.0 | 40.5 | 40.2 |

^aGrand total includes countries with fewer than 100 Jews, for a total of 1,100 Jews. Minor discrepancies due to rounding. Israel includes West Bank and Gaza.

TABLE 10. METROPOLITAN AREAS WITH LARGEST CORE JEWISH POPULATIONS, 1/1/2005

| Rank | Metro Area ^a | Country | Jewish Population | Share of World's Jews | |
|------|-----------------------------------|----------------|-------------------|-----------------------|--------------|
| | | | | % | Cumulative % |
| 1 | Tel Aviv ^{b,c} | Israel | 2,707,000 | 20.8 | 20.8 |
| 2 | New York ^d | U.S. | 2,051,000 | 15.7 | 36.5 |
| 3 | Los Angeles ^d | U.S. | 668,000 | 5.1 | 41.6 |
| 4 | Jerusalem ^e | Israel | 660,000 | 5.1 | 46.7 |
| 5 | Haifa ^b | Israel | 656,000 | 5.0 | 51.7 |
| 6 | Southeast Florida ^{d, f} | U.S. | 498,000 | 3.8 | 55.5 |
| 7 | Be'er Sheva ^b | Israel | 347,000 | 2.7 | 58.2 |
| 8 | Philadelphia ^d | U.S. | 285,000 | 2.2 | 60.4 |
| 9 | Paris ^g | France | 284,000 | 2.2 | 62.6 |
| 10 | Chicago ^d | U.S. | 265,000 | 2.0 | 64.6 |
| 11 | Boston ^d | U.S. | 254,000 | 2.0 | 66.6 |
| 12 | San Francisco ^d | U.S. | 218,000 | 1.7 | 68.2 |
| 13 | London ^h | United Kingdom | 195,000 | 1.5 | 69.7 |
| 14 | Toronto ⁱ | Canada | 180,000 | 1.4 | 71.1 |
| 15 | Washington ^j | U.S. | 166,000 | 1.3 | 72.4 |
| 16 | Buenos Aires ^k | Argentina | 165,000 | 1.3 | 73.6 |
| 17 | Baltimore ^j | U.S. | 106,000 | 0.8 | 74.5 |
| 18 | Detroit ^d | U.S. | 103,000 | 0.8 | 75.2 |
| 19 | Moscow ^l | Russia | 95,000 | 0.7 | 76.0 |
| 20 | Montreal ^l | Canada | 93,000 | 0.7 | 76.7 |
| 21 | Cleveland ^d | U.S. | 86,000 | 0.7 | 77.4 |
| 22 | Atlanta ^j | U.S. | 86,000 | 0.7 | 78.0 |

^aMost metropolitan areas include extended inhabited territory and several municipal authorities around central city. Definitions vary by country. Some of the estimates may include non-core Jews.

^bAs newly defined in the 1995 Israeli Census.

^cIncludes Ramat Gan, Bene Beraq, Petach Tikvah, Bat Yam, Holon, Rishon Lezion, Netanya, and Ashdod, each with a Jewish population above 100,000.

^dConsolidated Metropolitan Statistical Area (CMSA).

^eRevised estimate. Includes the whole Jerusalem District and parts of Judea and Samaria District.

^fMiami-Ft. Lauderdale and West Palm Beach-Boca Raton CMSA.

^gDepartments 75, 77, 78, 91, 92, 93, 94, 95.

^hGreater London and contiguous postcode areas.

ⁱCensus Metropolitan Area.

^jMetropolitan Statistical Area (MSA).

^kCapital Federal and Gran Buenos Aires Partidos.

^lTerritory administered by city council.

communities outside of Israel did Jews constitute at least about 5 per 1,000 (0.5 percent) of their country's total population. In descending order by the relative weight (not size) of their Jewish population, they were Gibraltar (24.0 Jews per 1,000 inhabitants), the U.S. (18.0), Canada (11.7), France (8.2), Uruguay (5.7), Australia (5.1), and the UK (5.0).

By combining the two criteria of Jewish population size and density, we obtain the following taxonomy of the 26 Jewish communities with populations over 10,000 (excluding Israel). There are five countries with over 100,000 Jews and at least 5 Jews per 1,000 of total population: the U.S., France, Canada, the UK, and Australia; another three countries with over 100,000 Jews and at least 1 per 1,000 of total population: Argentina, Russia, and Germany; one country with 10,000–100,000 Jews and at least 5 per 1,000 of total population: Uruguay; nine more countries with 10,000–100,000 Jews and at least 1 per 1,000 of total population: Ukraine, South Africa, Hungary, Belgium, the Netherlands, Chile, Belarus, Switzerland, and Sweden; and eight countries with 10,000–100,000 Jews and less than 1 per 1,000 of total population: Brazil, Mexico, Italy, Turkey, Venezuela, Spain, Iran, and Romania.

The overwhelmingly urban concentration of Jewish populations globally is evinced by the fact that in 2005, 51.7 percent of world Jewry lived in only five metropolitan areas—Tel Aviv, New York, Los Angeles, Jerusalem, and Haifa—and another 25 percent lived in the next 15 largest metropolitan areas (table 10).⁶⁶ The Jewish population in the Tel Aviv urban conurbation extending from Netanya to Ashdod now exceeds by far that in the New York Standard Metropolitan Area extending from New York State to parts of Connecticut, New Jersey, and Pennsylvania. Of the 22 largest metropolitan areas of Jewish residence, 12 were located in the U.S., four in Israel, two in Canada, and one each in France, the UK, Argentina, and Russia.
